Customer Lookup

Feature documentation for Customer Lookup, written by its BDD feature tests.

The application

Customer Lookup is a desktop application for the front office. Before a clerk takes on a new customer, they search the customer list by name to see whether the customer is already on file. That keeps one record per customer, so service history, invoices and contact details stay together.

A search shows every customer whose name matches, or tells the clerk that no customer was found. Searching never changes the customer list.

Who uses it

- **Clerks** search the list while taking a call or filling in a new customer form.
- **Office managers** use this document to see which features are ready and which are still in development.

This document

Each feature below was written as Given / When / Then scenarios before the code that makes them pass, and the scenarios are run against the application by its test suite.

- Each feature shows when it was last run and where it is in its life cycle, from *Proposed* to *Accepted* and the requirement it satisfies.
- Each scenario shows whether it **Passed** or **Failed**, with the reason when it failed.

This is a sample. Customer Lookup is an example application made up to show what a PsBDD document looks like.

Table of Contents

Feature 1: Customer list

- Scenario 1: Customer is found in the list
- Scenario 2: Unknown customer is not found

Feature 1: Customer list

Run: 2026-10-28 09:26:25

Status: In Development

As a clerk
I want to check whether a customer is in the customer list
So that I do not create the same customer twice

> **REQ#014:** The system shall report whether a customer is in the customer list.

Scenario 1: Customer is found in the list

Given a customer list with "Smith" and "Jones"

When the clerk searches for "Smith"

Then the customer is found

And exactly one match is returned

Status: Passed

Scenario 2: Unknown customer is not found

Given a customer list with "Smith" and "Jones"

When the clerk searches for "Brown"

Then no customer is found

But the customer list still holds 2 customers

Status: Passed
